On the DP-CP identity

Hedde Zeijlstra

Georg-August-Universität Göttingen

In this talk I argue that a particular view on selection and feature percolation opens up the way to re-install verbal c-selection: selection of verbal arguments taking place in the syntax. One of the ingredients is the categorial identity of DP and CPs where I will present a modified view proposed by Kastner (2015) that takes CPs to be clausal DP (in)definitites.
